**BOARD:** Skulman-Issues

**LIST:** Export

## ≡ Description:

When you are on a page of a table and you add an element: When validating the configuration of this element, you should return to the page of the table from which you created the element

Example :

when I created SVT from the page 2 (Screenshot 1), after having validated the configuration of SVT, the application redirected me to page 1 (screenshot 2) instead of redirecting me to page 2 (Screenshot 1)
